IMPORTANT / PRATT & WASTE CONNECTIONS OPERATIONAL UPDATE FROM ENCANA

December 12, 2014

Dear Vista Ridge Neighbors,

Over the past several days we have implemented a number of low frequency noise mitigation strategies at the Pratt well site. Despite these efforts, there are still noise issues with the current rig. Therefore, once we've reached total depth, cased and cemented the current well, we will rig down, remove all associated drilling equipment, including sound mitigation and secure the site. We have encountered some operational delays; nevertheless, we anticipate starting rig down activity within the next 7-10 days. Additionally, we are redirecting the rig that is currently scheduled to commence operations at the Waste Connections well site in late December to another site in the basin. We will also remove the sound walls at that location.

Our intention is to take this time to develop a solution to the low frequency noise issue and return to these locations in the future. We take your concerns regarding this issue very seriously and appreciate the time you've taken to provide candid feedback.

We've always worked hard to be a good neighbor and will continue to do so.

Once we have additional information regarding timing we will share it.

We will consult with the State prior to returning to these locations.
