

Over the next few weeks, Crestone Peak Resources we will be on the Erie Champlin well site that is just west of Colliers Boulevard and north of Erie Parkway to remediate a previously abandoned well.

This activity will be done in phases over a few weeks. The first phase will include moving a large stockpile of dirt near the location for the surface owner so we can access the well site. This should take about two weeks. The second phase will start in mid-November, when a small service rig will move on to the location to remediate the well. That phase should take about three days to complete.

All access to this location is limited to the access road. All work will be done during the day. We anticipate being done with all activity at this site by the end of November.
